## Interstate-McBee Replacement Caterpillar® Engine Belts

As the cost of engine repairs and fuel continue to increase, engine belts have become an increasingly crucial component for proper performance. When in good condition and operating properly the various engine belts aide in the components optimum usage and longer life. When not operating properly, they can slip or "miss" which may cause the engine to operate at less than optimal efficiency resulting in considerable wear to engine components.

### Interstate-McBee Engine Belts Features and Benefits

- Expansive coverage including solid "V", Cog or Tooth "V" and flat Ribbed or "Poly-V" belts to replace most component belts.
- The tooth/cog, ribs and body of each belt consists of a high sheer strength rubber compound that has a resistance to oil and heat which helps stop glazing and increases the belt life.
- The tensile cords are made of high strength – low stretch polyester cord leading to less tension adjustments over the life of the belt.
- The backing is coated with a polychloroprene impregnated fabric for superior impact resistance.
- A woven polyamide fabric covers the tooth/cog facing for high wear resistance and low friction which decreases slip.
