"Quality Without Compromise"

Remanufacturing Process

- All of our injectors are 100% tested to guarantee quality.
- Parts undergo hours of in-house testing and months of field service to assure reliability.
- We assign a unique trim code to each one of our injectors, ensuring you will have better fuel economy, lower emissions, and longer engine life.

Every core assembly to be remanufactured goes through a full tear down.

Each part is sorted separately.

Individual parts must go through a strict sequence of restorations and examinations in order to be considered qualified.

Non-qualified parts are discarded.

Injectors are assembled using only qualified parts.
